The Corsair 28s

The Corsair 28, like all of its predecessors and current sisters, is an easily trailerable sport boat because of its light weight and low profile. As with other Corsair trimarans, the transition from trailering to sailing takes about 30 minutes — the mast is raised or lowered using the installed winch on the trailer. Everything about the Corsair 28 is designed to get you on the water and across the water quickly, comfortably and affordably.

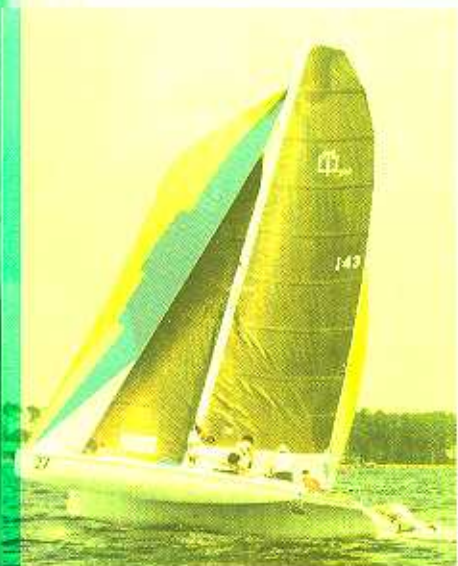

The Corsair 28 Center Cockpit and Corsair 28 Aft-Cockpit both have roomy, functional interiors with all the necessary amenities for comfortable cruising. The Corsair 28R is the super-high-performance version of either of these modes by virtue of its taller carbon fiber spar which is more efficient and powerful on the water and lighter on the trailer.

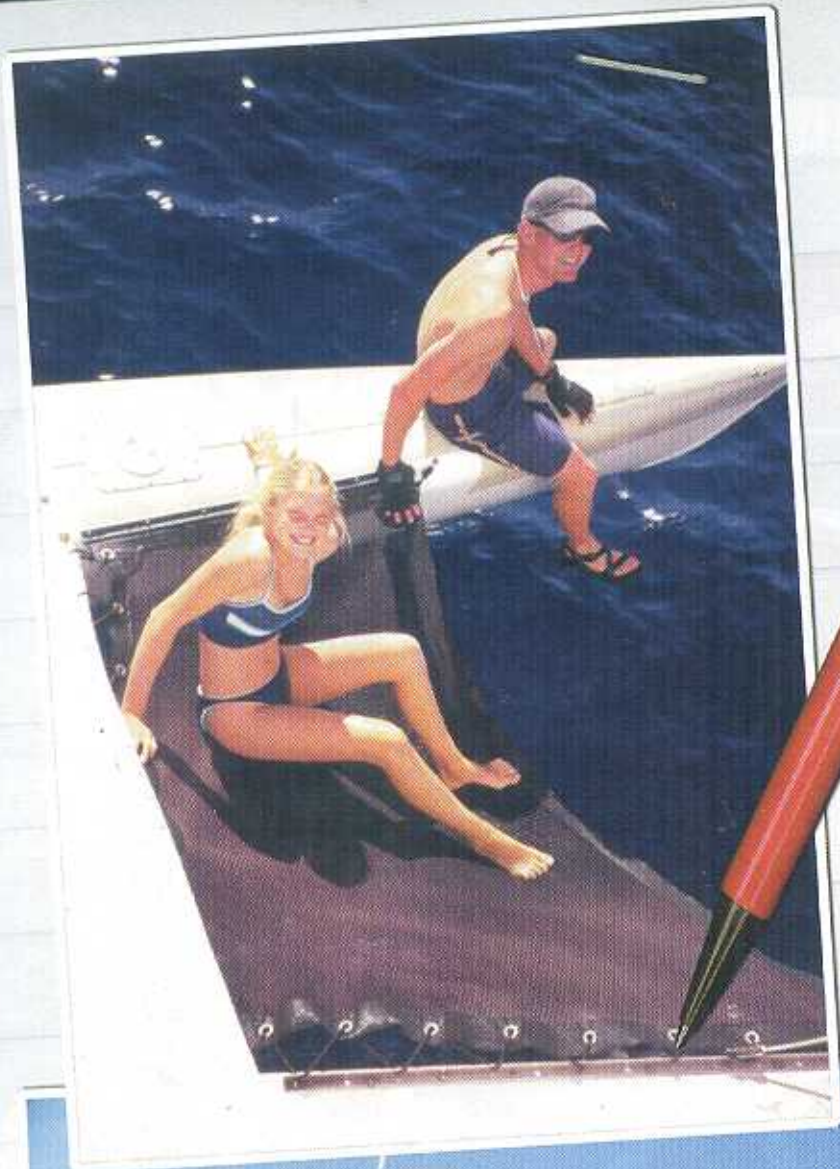

Although both basic models have excellent sleeping accommodations, the Corsair 28 Center Cockpit offers an aft cabin and V berth as well as standard galley area with two-burner stove, stainless-steel sink, fresh water tank and pump, and an enclosed marine head. The Corsair 28 Aft-Cockpit model (interior shown) sleeps four (two in the V-berth and in each of two single main-cabin bunks), and is trimmed down in the accessories area for lighter weight and more speed potential.

Despite the great deck space and ample quarters below, the Corsair 28s slide right up to a sandy beach because of the rudder which pivots up 180-degrees, and the fully retractable daggerboard. The models in the Corsair 28 range all offer the incomparable performance of Corsair Trimarans with roomy cabins, spacious decks, and an extensive list of options.
