The Corsair 31s

The Corsair 31 is a true long-range performance cruiser and racer. It features spacious cruising accommodations, standing headroom, efficiently laid out deck, high-performance sail plans, and it continues to develop over time, constantly incorporating improvements and refinements. The Corsair 31s are now available in three basic models, with different deck, interior and rig arrangements to meet the needs of cruisers, racers, and those who like to do a little of both: the Corsair 31 Center-Cockpit ultimate cruiser, the Corsair 31 Aft-Cockpit cruiser, and the Corsair 31R pure performance machine.

All Corsair 31 models, like all other Corsairs, incorporate the exclusive folding system which enables them to be easily trailered. You can race or cruise with the wind and then return home on the highway in comfort, greatly extending your sailing horizons. The cockpit comfortably seats six adults, though this is seldom necessary as the broad decks and nets give the crew many other comfortable places to spread out and relax. Winches, halyards and sheets, and the controls for the daggerboard, rudder and outboard motor can all be operated from the cockpit. A transom swim step provides easy access on and off.

The Corsair 31 Ultimate Cruiser, the center-cockpit model, gives additional sleeping accommodation with a stern cabin and reduced cockpit area, combining performance with the ultimate in cruising accommodations. The forepeak area houses the head, shower, wet/dry storage and hanging locker. This alternative interior layout allows for a full salon and aft cabin interior that is without obstruction. The Corsair 31 Ultimate Cruiser has full standing headroom, a hot and cold pressurized water system, and an optional gas cooker.

For high-performance cruising the Aft-Cockpit Corsair 31 offers a spacious cockpit, roomy and functional interior, and plenty of storage space below deck (a table and extra bunk slide completely out of the way when not in use). The Corsair 31R Aft-cockpit racing version is intended for the experienced sailor who wants the ultimate performance boat and features lightweight construction, enhanced performance from the addition of a carbon-fiber rig, retractable bowsprit, and a suit of racing sails including asymmetrical spinnaker and screacher. All Corsair 31s accommodate owner-specified mix-and-match options.
